

## Water reducing/plasticizing admixture

**CE Approved – Certificate No. 0086-CPD-469071  
EN934 part 2 table 2**

### Description of Product

POZZOLITH<sup>®</sup> 300N is a ready-to-use, liquid admixture for making more uniform and predictable quality concrete.

POZZOLITH<sup>®</sup> 300N complies with:

- EN 934-2
- ASTM C-494 Type A
- WRC Approved - for contact with Potable Water Water Regulations Advisory Service (WRSR) approval listing 0208520

### Fields of Application

- Increased Strength - compressive and flexural (Table 1)
- Relative Durability to Damage from Freezing and Thawing - well above industry standards

- Reduced Water Content Required for a given workability
- Normal Setting Characteristics (Table 2).

### Features and Benefits

Concrete with POZZOLITH<sup>®</sup> 300N admixture sets at a rate comparable to plain concrete while providing the following special qualities:

- Improved Workability
- Reduced Segregation
- Superior Finishing Characteristics for flatwork and cast surfaces
- Effective as a single admixture or as a component in a POZZOLITH<sup>®</sup> System.

### Technical Data/Typical Properties

Appearance	Brown liquid
Specific gravity @ 20°C	1.20 g/cm <sup>3</sup>
pH-value	5.0
Alkali content (%)	Less than or equal to 0.5
Chloride content (%)	Less than or equal to 0.10
Chlorine content (%)	Less than or equal to 0.10

**Typical Results***Ambient Temperature of 22°C*

- Average of results from trials using 13 different cements.
- Cement content 280 Kg per cubic metre and 100 mm slump.
- POZZOLITH® 300N at 0.2% by weight of cement.

*Ambient Temperature of 10°C and 22°C*

- Mixes cured for 1 day @ 10°C and then for 27 days @ 22°C.
- Cement content 300 Kg per cubic metre and 90 mm slump.
- POZZOLITH® 300N at 0.2% by weight of cement.

**Table 1.** Strength performance average of thirteen tests using thirteen different brands of type 1 cement

(3) Specimens made at concrete temperature 10°C and stored in laboratory air at 22°C for first 24 hours; thereafter, cylinders moist cured at 22°C.</p>						

### Application Procedure

#### Dosage

For most concrete mixes using average concrete ingredients, POZZOLITH® 300N admixture is recommended for use at a rate of:

*By Volume* - 0.15 to 0.50 litres per 100 Kg of cement (binder).

*By Mass* - 0.18 to 0.60 kg per 100 Kg of cement (binder).

Due to variations in job conditions and concrete materials, dosage rates other than the recommended amounts may be required. In such cases, consult your local BASF Construction Chemicals (UK) representative.

Trial mixes should be made with job materials and approximating job conditions to determine dosage rates and performance.

### Application

POZZOLITH® 300N admixture is recommended for use in concrete where improved, normal setting characteristics are desired. As a result of the above advantages, this admixture improves pumped concrete, shotcrete (wet mix), and conventionally placed concretes. It improves plain, reinforced, precast, prestressed, lightweight or normal weight concrete.

POZZOLITH® 300N admixture can be used with air entraining cements and air-entraining admixtures approved under AASHTO, ASTM and CRD specifications - including those manufactured by BASF - when air-entrained concrete is desired. When used in conjunction with another each admixture must be dispensed separately into the mix.

This admixture can be used in either white or coloured architectural concrete.

### Packaging

POZZOLITH<sup>®</sup> 300N admixture is supplied in 210 litre drums and bulk.

### Storage

POZZOLITH<sup>®</sup> 300N must be stored in a place where temperature does not drop below +5°C. If product has frozen, thaw at +3°C and agitate until completely reconstituted. Store under cover, out of direct sunlight and protect from extremes of temperature. Failure to comply with the recommended storage conditions may result in premature deterioration of the product or packaging. For specific storage advice consult BASF IBC Admixture Systems Technical Services Department.

### Shelf Life

12 months if stored according to manufacturer's instructions in unopened containers.

### Watchpoints

If POZZOLITH<sup>®</sup> 300N admixture has frozen, thaw at temperatures above 2°C and completely reconstitute by mild mechanical agitation. Do not use pressurised air for agitation.

### Health and Safety

\*For full information on Health and Safety matters regarding this product the relevant Health and Safety Data Sheet should be consulted.

The following general comments apply to all products.

As with all chemical products, care should be taken during use and storage to avoid contact with eyes, mouth, skin and foodstuffs, (which may also be tainted with vapour until the product is fully cured and dried). Treat splashes to eyes and skin immediately. If accidentally ingested, seek medical attention. Keep away from children and animals. Reseal containers after use.

### Spillage

Chemical products can cause damage; clean spillage immediately.

### DISCLAIMER

"BASF IBC Admixture Systems Limited" (the Company) endeavours to ensure that advice and information given in Product Data Sheets, Method Statements and Material Safety Data Sheets (all known as Product Literature) is accurate and correct. However, the Company has no control over the selection of its products for particular applications. It is important that any prospective customer, user or specifier, satisfies him/her-self that the product is suitable for the specific application. In this process, due regard should be taken of the nature and composition of the background/base and the ambient conditions both at the time of laying/applying/installing the material and when the completed work is to be brought into use.

Accordingly, no liability will be accepted by the Company for the selection, by others, of a product, which is inappropriate to a particular application.

Products are sold subject to the Company's standard conditions of sale and all customers, users and specifiers, should ensure that they examine the Company's latest Product Literature.
